

BUSINESS ADMINISTRATION TRACKING MANAGER

Mitchell Humphrey's Business Administration Tracking Module increases the efficiency of Managers and Business Administrators by pulling data from all GSS modules to provide a report of all activity against one block and lot.

- List data of all activity on a block and lot from multiple departments into one report.
- Separate Tax Utility Program keeps all departments in sync with up-to-date property information from the tax assessor.
- Master applications developed by Government Officials from New Jersey provide accurate reporting.
- Multi-level passwords within applications for multiple department access.
- Quick reference to all activity on a specific block and lot with a click of a button.
- All departments can share information through separate reports available for each GSS module.
- Alerts built in each module prevent action from taking place until prior approvals are released.
- Increase Revenue – Track revenues more efficiently with detailed reports. Our software tracks violations, inspections, bonds and escrow due, and permits ready to be picked up.

- Improved Citizen Satisfaction – All activity from multiple departments streamlined in a single report. Our software provides up-to-the-minute information through one report.
- Easy-to-Use Interface – Be up and running quickly with our Windows-based software. After a few hours of training, everyone in your office will be able to efficiently manage your municipality's permit process.
